Networking Academy

IBM SkillsBuild

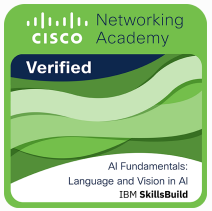

Statement of Achievement

Jude Michael T. Arriba

has successfully achieved student level credential for completing the AI Fundamentals: Language and Vision in AI course, provided by Cisco Networking Academy in collaboration with IBM SkillsBuild.

The graduate is able to proficiently:

- Apply AI in real contexts by writing natural-language queries and interpreting AI-driven recommendations.
- Identify AI ethics implications in real-world AI applications.
- Explain how AI systems work by classifying language processing and differentiating conversational AI.
- Identify prediction limits and describe how training improves AI accuracy. Identify real-time computer vision and generative imaging processing examples.
- Select image-classification applications, create visual assets with Google Gemini, and use AI images responsibly.
- Differentiate AI agents by identifying strengths, limits, common error sources, predictability, and fairness considerations.
- Plan an AI career path by identifying growth factors, differentiating technical, non-technical, and hybrid roles, choosing appropriate tools, and building a personal learning roadmap.
